

Han cantado línea

Dado un **fichero de texto** y un **número de línea**, encuentra la línea que corresponde.

Notas

- Si el número de línea indicado no corresponde con ninguno del fichero se debe devolver **None**.
- Ten en cuenta que la primera línea debe empezar en 1.

Ejemplo

Supongamos que el fichero contiene el siguiente texto:

```
1 Beautiful is better than ugly
2 Explicit is better than implicit
3 Simple is better than complex
4 Complex is better than complicated
5 Flat is better than nested
6 Sparse is better than dense
7 Readability counts
8 Special cases arent special enough to break the rules
9 Although practicality beats purity
10 Errors should never pass silently
11 Unless explicitly silenced
12 In the face of ambiguity, refuse the temptation to guess
13 There should be one|and preferably only one|obvious way to do it
14 Although that way may not be obvious at first unless you're Dutch
15 Now is better than never
16 Although never is often better than right now
17 If the implementation is hard to explain, it's a bad idea
18 If the implementation is easy to explain, it may be a good idea
19 Namespaces are one honking great idea|let's do more of those
```

Si el número de línea es 3, la salida sería:

Simple is better than complex
